Claims 1-22 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicant has not pointed out support in the specification for the amendment "to reduce damage associated with absorption" (claims 1, 11 and 22) as a function of the instant method. Although absorption is discussed in relation to the prior art presented in paragraphs 0004 and 0037, it is unclear that the instant method employs irradiation to reduce damage associated with absorption. This issue is particularly important because applicant has argued that the primary reference to Seward is strictly focused upon laser damage associated with compaction whereas the instant invention is focused upon laser damage associated with absorption (See page 7, lines 3-6). Applicant is requested to point out support for the amendments in the original disclosure.
